

Fig. S4. Full multigenic phylogenetic tree of the 147 fungal genomes and 304 reference genomes. The tree was estimated in IQ-TREE with model LG+C60+H+G+PMSF, using a supermatrix of 240 conserved marker proteins constructed with PhyloFisher. SAGs and reference genomes are colored by supergroup. Taxonomic groups containing SAGs are indicated. Bootstrap support is shown for all clades, with nodes highlighted in black when support is 100% and in grey when only slightly lower.
